

CHAMATH DILSHAN

Associate Software Engineer

chamathdilshan.dev@gmail.com • +94 775 616 104 • <https://ChamathDilshan.com> • [LinkedIn/Chamath Dilshan](#) • [GitHub/ChamathDilshanC](#) • Aluthgama, LK

Motivated Software Engineer with hands-on experience building full-stack web and mobile applications using Java, Spring Boot, Python (FastAPI), React, React Native, and Node.js. Skilled in designing RESTful APIs, modeling relational/NoSQL databases, and shipping production-ready features end to end. Comfortable in agile, Git-based teams, with working knowledge of Docker, CI/CD, and cloud platforms (AWS, GCP, Azure).

EXPERIENCE

Software Engineering Intern — Applantics (PVT) Ltd

6-Month Internship

- Contributed to application development, debugging, backend integration, and feature testing across live client projects.
- Collaborated with senior engineers on code reviews and release preparation, gaining exposure to production-quality development standards and real project delivery timelines.
- Learned and applied additional technologies on the job, including Laravel, Electron, and Flutter, to support cross-platform feature development.

Trainee Software Engineer — Institute of Java Software Engineering, Panadura, SL

2023-08 - 2026-03

- Developed scalable full-stack web applications using Java, Spring Boot, Node.js, and React, ensuring responsive and user-friendly interfaces.
- Designed, built, and integrated RESTful APIs, optimizing MySQL, PostgreSQL, and MongoDB queries, and worked with GitHub-based CI practices.
- Applied debugging, testing, and performance optimization strategies within agile, Git-based team workflows.

Freelance Software and Graphic Designer — Freelancer.com / Fiverr

2024-11 - Present

- Delivered end-to-end client solutions from requirements through deployment, hosting, and production release with strong client satisfaction.
- Designed and developed responsive websites and mobile-friendly interfaces using modern web technologies and usability-focused layouts.
- Combined graphic design, UI/UX design, and front-end web development to deliver polished, client-ready products.
- Managed multiple projects independently, coordinating timelines, client communications, and deliverables effectively.

PROJECTS

Cafeteria-System-Main

<https://github.com/ChamathDilshanC/Cafeteria-System-Main>

- Engineered a responsive cafeteria management web application using Vue and JavaScript to facilitate real-time menu updates, item customization, and efficient order tracking.
- Architected interactive user interfaces with dynamic Vue components, leveraging semantic HTML and custom CSS to create an intuitive and accessible experience across all devices.

FinFlow-Mobile-Application-Main-Repo — FinFlow umbrella (submodules: frontend + backend)

<https://github.com/ChamathDilshanC/FinFlow-Mobile-Application-Main-Repo>

- Architected the FinFlow umbrella platform by configuring submodules to seamlessly unify separate frontend and backend repositories.
- Engineered dynamic server-rendered web views using Python and Mako templates to streamline full-stack data flow and backend integration.
- Developed responsive client-side application components using TypeScript, JavaScript, and custom CSS to deliver a cohesive mobile user experience.

RevvUp-Main-Application — RevvUp premium multi-showroom motorbike marketplace | RevvUp — main app (frontend + backend submodules)

<https://github.com/ChamathDilshanC/RevvUp-Main-Application>

- Engineered a multi-showroom motorbike marketplace using TypeScript, JavaScript, and CSS to deliver responsive, interactive user interfaces across complex catalog workflows.
- Developed modular backend application services and data integration components utilizing Python within a structured submodule architecture.
- Automated build execution, repository submodule synchronization, and environment setup tasks using PowerShell scripts to streamline deployment pipelines.

VibeNet-Main — VibeNet monorepo — architecture docs, AWS setup guide, and frontend/backend git submodules.

<https://github.com/ChamathDilshanC/VibeNet-Main>

- Architected a unified monorepo infrastructure leveraging Git submodules to seamlessly integrate Go backend services with TypeScript, JavaScript, HTML, and CSS web modules.
- Engineered detailed system architecture documentation and cloud setup guides for AWS to standardize deployment and configuration pipelines across full-stack services.
- Orchestrated cross-repository integration workflows to streamline collaborative development between client-side interfaces built with TypeScript/JavaScript and server-side logic in Go.

VibeNet — Secure Real-Time End-to-End Encrypted Chat Platform

VibeNet Monorepo

- Frontend: Built a real-time E2EE chat client using Next.js 16 and TypeScript with Web Crypto API-based encryption, styled with Tailwind CSS and deployed live on Vercel.
- Backend: Developed a Go backend with WebSocket-based real-time messaging and DynamoDB/PostgreSQL for data storage, deployed on AWS EC2 with automated CI/CD pipelines.
- Architected the system as a multi-repository monorepo with Git submodules, comprehensive architecture documentation, and an AWS infrastructure setup guide.

RevvUp — Multi-Showroom Motorbike Marketplace

Main Application • Backend API • Frontend CI/CD

- Built a premium multi-showroom motorbike marketplace with a React Native (Expo) client and a FastAPI backend deployed serverless on Vercel.
- Integrated Supabase for authentication, data storage, and Google sign-in, and automated Android release builds with GitHub Actions.

FinFlow — Personal Finance Mobile Application

Frontend & Backend

- Developed a cross-platform personal finance app (React Native, Expo, NativeWind) with Google authentication and a real-time expense tracking UI.
- Built an async FastAPI backend with SQLAlchemy, Alembic migrations, PostgreSQL, and JWT-secured REST endpoints, documented with Swagger.

Nexa G Bucket Manager — Cloud File Manager with CI/CD

Mobile App Frontend CI/CD Backend

- Built a GCP-backed private/public cloud file manager (React Native/Expo, FastAPI, Supabase, Google Cloud Storage).
- Automated Android APK builds and releases with GitHub Actions, including secrets injection and versioned release publishing.

Distributed Microservices Architecture — Cafeteria Management System

Main Repository & Configurations & Platform & Services

- Engineered a scalable microservices platform using Spring Cloud with API Gateway, Config Server, and Eureka Service Registry.
- Developed loosely coupled services (User, Menu, Order, Kitchen) with centralized Git-based configuration and Docker Compose infrastructure (PostgreSQL, MongoDB).

JobMail — Job Application Email Generator

Live App GitHub Repository

- Built a Next.js application for generating and sending professional job application emails with real-time preview and multiple templates.
- Integrated Firebase Authentication, Gmail API (OAuth + attachments), and Outlook mailto workflows; deployed live at jobemail.me.

SpendSight — Mobile Finance Application

SpendSight Mobile Application

- Built a cross-platform React Native finance app with NativeWind and Firebase for expense tracking, account management, and secure authentication.

TaskFlow — Laravel Authentication System

Laravel Auth Demo App

- Built a modern authentication system with Laravel 12 and Tailwind CSS, featuring custom sign-up/sign-in pages and a polished UI, deployed on Railway.

PowerAlert — Utility Monitoring Platform

Frontend & Backend

- Built a full-stack utility monitoring platform with RESTful APIs, JWT-based access control, and responsive real-time monitoring workflows.

Ceylonic & create-stack-cli — Open-Source npm Packages

create-stack-cli & ceylonic

- create-stack-cli: Built a universal, interactive CLI scaffolder for React, Vue, Angular, and Vanilla JS projects with optional TypeScript, Tailwind CSS, ESLint, and Prettier integration, published as an open-source npm package.
- ceylonic: Developed a zero-dependency TypeScript utility library for Sri Lanka-specific data NIC parsing/validation plus Sinhala date, currency, and number formatting published as an npm package under the MIT license.

GCP Cloud Storage APIs and Cloud-Based Applications

Image Cloud Storage API • Student Management Cloud App

- Built a Spring Boot REST API migrating local file storage to Google Cloud Storage with multi-environment deployment profiles.
- Developed a Vue.js student management system backed by GCP Cloud SQL (PostgreSQL) and Cloud Functions.

SKILLS

Languages: Java, Python, JavaScript, TypeScript, PHP, Bash

Frameworks: Spring Boot, Spring Cloud, FastAPI, React, React Native, Node.js, Vue.js, Next.js, Laravel, Electron

Databases: MySQL, PostgreSQL, MongoDB, Supabase

APIs and Architecture: RESTful APIs, Microservices, JWT/OAuth, API Gateway, Eureka Service Registry

Mobile: React Native, Flutter, Expo, NativeWind

Cloud and DevOps: AWS, GCP, Azure, Docker, Docker Compose, GitHub Actions CI/CD

Tools: Git, GitHub, Postman, Figma

EDUCATION

Institute of Software Engineering BSc (Hons), Computer Science (Top-Up)	2023-08 - 2026-03
---	-------------------

University of Moratuwa Certificate, Full Stack Engineer	2025-06 - 2025-08
---	-------------------

Oxbridge College Diploma, Spoken English	2023-03 - 2024-03
--	-------------------

K/Gurulugomie Maha Vidyalaya GCE A/L and O/L, Commerce	
--	--

CERTIFICATES

- **Practical GitHub Actions and Kubernetes Fundamentals** — LinkedIn Learning
- **Manage Virtual Machines in Azure** — Microsoft
- **Front-End Web Development** — University of Moratuwa
